More advanced markets must focus on enhancing grid flexibility, adapting policy frameworks to the needs of variable renewables, prioritising battery storage, and streamlining ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

Solar and wind not only kept pace with global electricity demand growth, they surpassed it across a sustained period for the first time, signalling that clean power is now steering the direction ...

Learn everything about grid-tied solar systems: how they work, costs, installation, and benefits. Complete 2025 guide with real examples and expert insights.

Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity expansion. Low module costs, relatively efficient permitting processes ...

Solar reached 11% of U.S. electric generation capacity, said data through April from the Federal Energy Regulatory Commission. The Federal Energy Regulatory Commission (FERC) ...

Solar power is expected to provide more than half of the new electricity capacity added in 2025. Developers have already installed 12 GW in the first half of the year, with another 21 GW ...
