Waiting to install solar panels means waiting to save money on your energy bill, which will continue to rise over time. We have just seen an increase in electricity price throughout the entire ...

Given the enormous long-term savings and environmental benefits, there's never been a bad time to install solar panels, but 2025 is shaping up to be an especially favorable year to take the ...

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry experts and ...

Residential solar might be down today, but its long-term prospects remain solid. We see that residential solar is poised for steady growth, especially for companies that take the right steps ...

We've been installing PV modules since 2010 - so not long enough to know if they'll last 30 years or not, but the really encouraging sign is that we've had no panel failures of any sort.

Most homeowners starting their solar journey today can expect to break even within about 10 years, then continue to enjoy at least 15 years or more of free electricity. Solar still pays for ...

Global solar photovoltaic capacity has grown from around 40 gigawatts in 2010 to approximately 2.2 terawatts in 2024. Only in that last year, installations increased by almost 40 ...

A representative from the university told us: "Most of the photovoltaic modules installed at the Energielabor in 1981 are indeed still working; they feed more than 3,000 kilowatt-hours of ...
