What is the general contracting structure for a battery energy storage system?

The first, and the topic of an earlier article, is the general contracting structure. Developers of battery energy storage system, or BESS, projects are using a multi-contractor, split-scope contracting structure instead of the more traditional single-contractor, turnkey approach. (See "Battery Purchase Contracts" in the December 2021 NewsWire.)

Should a battery procurement contract aggregate liability in a collective project?

For example, if a developer has a number of projects supplying battery storage under a single offtake contract, then it might prefer a single battery procurement contract aggregating liability in the collective project, given that liability under the offtake contract may be connected for failure to develop the collective project.

How does station load loss affect a battery's state of charge (SOC)?

In the case of station load losses, the parasitic power consumption required to operate the BESS, in particular the energy intensive ventilation and cooling systems needed for maintaining safe facility operating temperatures, significantly move the needle - literally - of a battery's state of charge (SOC).

What are the different types of procurement contracts?

There are three key types of procurement contracts--power purchase agreements (PPAs) or energy storage services agreements; engineering, procurement, and construction (EPC) agreements; and build-transfer agreements (BTAs)--and several key risks that must be allocated between the parties.

The checklist items contained within are intended for use in procurement of commercial scale lithium-ion BESS, although they may be used more generally for other BESS technologies.

There are three key types of procurement contracts--power purchase agreements (PPAs) or energy storage services agreements; engineering, procurement, and construction (EPC) ...

The procurement appears focused on installation, repair, or alteration of battery energy storage infrastructure to support Army operations. This procurement does not utilize any small ...

Find your local APEX Accelerator (opens in new window) for free government expertise related to contract opportunities. APEX Accelerators are funded in part through a cooperative ...

Many suppliers attempt to structure procurement agreements so that, following delivery and a short inspection

period, any defects in the BESS equipment will be considered automatically to ...

In the quest for reliable, renewable-sourced baseload power, utility and industrial offtakers have turned in droves to electro-chemical battery energy storage systems (BESS).

Potential pitfalls, lessons learned, and "unknown unknowns" in the BESS planning and procurement process, where utilities will have to manage risks in a relatively immature product ...

This chapter supports procurement of energy storage systems (ESS) and services, primarily through the development of procurement documents such as Requests for Proposal (RFPs), Power Purchase ...
