Could energy storage systems strengthen Brazil's National Interconnected System (SIN) grid?

Brazilian consultant CELA has said the inclusion of electrical energy storage systems in a federal government capacity reserve auction which could take place in June 2025 could reinforce Brazil's National Interconnected System (SIN) grid.

What is Brazil's energy expansion plan 2034?

By addressing regulatory frameworks, economic viability, and future projections, the plan sets the stage for a sustainable and resilient energy future. Brazil's Ten-Year Energy Expansion Plan 2034 details the strategic roles of distributed generation, battery storage, and future projections.

How would a storage plant auction work in Brazil?

The electricity supplied by storage facilities would be settled on Brazil's short-term energy market and paid into the Power Account for Capacity Reserve. Contracted volumes of energy would be settled without price risk to the storage plant operator. "In practice, the auction offers a model with an attractive risk-return ratio," said CELA's Ramos.

Are battery storage systems viable in Brazil?

In Brazil, the cost of turn-key battery systems is notably high due to significant tax burdens. However, future projections indicate a potential reduction in battery costs, which could enhance economic feasibility for various applications. The booklet explores the viability of battery storage systems across different scenarios. For instance:

According to PDE 20341, the need for additional supply to meet the power requirement begins in 2027, reaching the order of 5.5 GW in 2028 and reaching more than 36 GW in 2034.

For Brazil, the 2026 auction could serve as a watershed moment -- defining not just how storage integrates into its National Interconnected System, but how the country approaches reliability ...

Development of New Energy Storage during the 14th Five -Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system. ...

CELA has predicted the Brazilian energy storage systems market will grow 12.8% per year through 2040, with an increase of up to 7.2 GW of installed capacity during that period.

Brazil energy storage power station construction period

The capacity tariffs for the 48 pumped storage power stations in operation and proposed to be commissioned by the end of 2025 (with a weighted average price of 77USD/kW) were announced, ...

This article provides a comprehensive guide on battery storage power station (also known as energy storage power stations). These facilities play a crucial role in modern power grids by storing electrical ...

This document outlines strategic guidelines for distributed generation and battery storage behind the meter, highlighting how Brazil intends to advance its energy sector to accommodate ...

That's Brazil for you - always dancing to its own samba rhythm in the energy sector. The newly announced Universal Energy Storage Power Station could be the missing puzzle piece in their ...
