Like many others, I'm in the process of upgrading my motorhome's solar system from 12V to 48V. This has created a quandary that I'm seeking to resolve, the DC-DC power transfer process.

There isn't a converter out there cheaper than your car that can handle what a 48v rackmount can put out. Get (or build) a nice sized 12v based system and call it a day!

It is not advisable to use a 12V battery for a 48V inverter as the voltage difference could damage the inverter. Inverters are designed to work with specific voltages and using an incompatible ...

Connecting a 12V battery directly to a 48V inverter will not work because the inverter requires at least 48 volts to operate. The inverter may not turn on, or if it does, it could enter ...

I found out that would be difficult as it's PWM and most inverters are now MPPT charger. I think I've decided on keeping the old system in place. I'd use it for the existing 12v wiring and I'd ...

Four 205 Amp-hr, 12V batteries in series can supply 205 Amp-hrs at 48 Volts. If you wire the batteries in parallel you do get 820 Amp-hrs, but only at 12 Volts. The inverter will not work. The amount of ...

So I have made it easy for you, use the calculator below to calculate the battery size for 200 watt, 300 watt, 500 watt, 1000 watt, 2000 watt, 3000 watt, 5000-watt inverter

Whether you're powering an RV, building a solar setup, or running an off-grid home, choosing the right inverter system voltage is crucial. Many beginners ask: Should I use a 12V, 24V, ...
