---

More than 720 GW of solar capacity are in development: about 250 GW under construction, nearly 300 GW in pre-construction phases, and 177 GW of announced projects, ...

The roadmap summarized the industry's development situation for 2024, while also predicting development trends for the coming five years. In 2024, newly-added solar PV installations ...

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry experts and ...

A vast field of solar panels, fixed to steel trusses in shallow water, has become the world's first gigawatt scale open sea photovoltaic farm and a test bed for how to run a modern grid on ...

In Article Audio Player China's solar power sector is bracing for a sharp slowdown in new installations in 2026 after a major policy overhaul last year altered how renewable energy projects ...

Reducing carbon footprint of PV products is critical for policy design. Over recent decades, China has risen to a preeminent global position in both solar photovoltaic (PV) adoption and ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

China's National Energy Administration (NEA) reported 11.04 GW of new solar capacity in July, down about 48% year-on-year. Even so, additions reached 223.25 GW in the January-July ...
