What is site power distribution equipment?

Our site power distribution equipment is designed to withstand the tough conditions of construction sites and is used to supply temporary power to site cabins, heaters, lighting, tools and plant equipment. Your partners in Temporary Power Distribution.

How to plan electric power distribution in buildings & infrastructure facilities?

The planning of electric power distribution in buildings and infrastructure facilities is subject to constant transformation. The search for an assignment-compliant, dependable solution should fulfill those usual requirements placed on cost optimization, efficiency, and time needs.

What is a distribution cabinet?

Distribution cabinets are connected behind connection, group or main distribution boards and are used for power distribution through CEE and earthing contact sockets with upstream protective devices. Connected loads from 22 to 277 kVA (32 A to 400 A main fuse). Please note the following special features:

What is a connection distribution cabinet?

Connection distribution cabinets are connected to the public supply network and serve both for measuring energy consumption and as energy distributors by means of built-in CEE and earthing contact sockets with upstream protective devices. The connected loads range from 55 to 436 kVA (80 A to 630 A main fuse).
