I am hoping someone can help me create a simple circuit to ...

Many devices need more power to function properly than DC can provide. They're designed to run on the 120-volt AC power supplied to homes in the U.S. Alternating current or AC, ...

DC-DC Polarity Inverter : This circuit generates a negative polarity voltage from a positive polarity one. This is useful for OP-amp circuits and low power audio amps where you need simultaneous +V and ...

This approach is called "polarity inversion", resulting in a device that is able to convert the positive voltage of a power supply into a low current negative voltage.

This is a circuit that outputs a $-V_{cc}$ voltage, i.e., an output voltage V_{out} that is almost the same level as V_{cc} but opposite in polarity. Note that this circuit can only provide a limited amount of negative ...

Most modern inverters utilize some form of H-Bridge circuitry to change the polarity of direct current. In most cases, the lower voltage DC current needs to be amplified to match the ...

I am hoping someone can help me create a simple circuit to reverse the polarity of an input. Working with two wires, a +12V constant and a -12V which is pulsed (think turn signal light).

One participant suggests using a negative voltage regulator to invert the output DC voltage, while another proposes using a center-tapped transformer for dual polarity.
