The European Union's FIT-for-55 and RePower EU policies set forth highly ambitious targets for the deployment of variable renewables. As a result, there will be a significant increase in ...

The EU has unveiled an ambitious recommendation to accelerate the deployment of innovative solar technologies and smart grids. This strategic initiative aims to cut energy costs, drive ...

The European Union is on track to become a global solar powerhouse, with ambitious goals of reaching 750 GW by 2030. But the sun doesn't always shine.

Solar is providing Europe with record levels of cost-competitive, renewable energy. To go even further, we need to tap into system flexibility and electrification. Let's flex our energy system for ...

The EU should continue to prioritise the deployment of solar panels above all else. Not doing so would be far more damaging to Europe's economic and environmental resilience than an ...

Transform Europe's energy landscape by mastering the integration of solar power systems through strategic grid management and innovative storage solutions.

Grid-connected photovoltaic systems represent a transformative leap in Europe's renewable energy landscape, seamlessly connecting solar installations to the existing power ...

Since 2024, SolarPower Europe has led the Let's Flex campaign, aiming to position flexibility at the top of the EU energy policy agenda. In July, these efforts expanded with the launch of ...
