What drives rising demand for computing capability at the edge?

Rising demand for computing capability at the edge is being driven by a host of enterprise needs and objectives, according to Titus M, practice director at research firm Everest Group and leader of its cloud and infrastructure services research practice.

Which industries are putting Computing at the edge?

Nearly all industries have found a business need to put computing at the edge, said Yih-Khai Wong, an analyst at market research company ABI Research. For example, the automotive, healthcare, manufacturing and retail sectors are leading the way with edge deployments.

How can one-way edge computing help fintech companies?

Heightened security is also key for financial organizations, and one-way edge computing is helping fintech companies is by providing enhanced fraud-detection capabilities. When data processing occurs closer to its original source, it speeds up data analysis and fraudulent transactions can be caught faster.

What is edge computing?

Edge computing stakes out different "real estate" when locating areas of computing functions. Edge computing is a distributed computing framework that moves compute resources from the data center to remote locations within the execution layer near the exterior boundary of that computing environment.

Edge computing, the distributed IT architecture that puts data processing, analysis and intelligence as close as possible to the endpoints that are generating the data, is becoming central to ...

Several factors are propelling the growth of edge computing in Asia, making it an essential part of the enterprise computing ecosystem for the upcoming years. First and foremost, the shift ...

The survey revealed that the edge computing is still in the nascent stage of adoption in Asia Pacific, where micro data centers are primarily used as a preventive measure against data loss despite the ...

A look at some of the primary examples of edge computing and how different industries are using them.

Countries like China and India are making significant investments in building advanced digital infrastructures, further boosting the growth of edge computing.
