"The surge in first quarter wind installations, combined with a strong development pipeline, underscores the wind industry's resilience and its capacity to rapidly deliver the clean, affordable, ...

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. Annual renewable power generation surpassed nuclear ...

"Crossing the 100 GW milestone for solar, launching groundbreaking projects like South Fork Wind, and a record-setting pace of new contracts for clean energy are clear indicators of the ...

The U.S. Department of Energy today released three reports showing record growth in land-based wind energy, significant expansion of the pipeline for offshore wind projects, and ...

Last year, the U.S. saw additions of about 45 GW of solar and wind combined. This increase from 2023 shows robust progress, but we still need more growth in carbon free generation ...

In an impressive demonstration of renewable energy's growth, solar and wind sources accounted for nearly 98% of the new electrical generating capacity added in the United States during ...

The Federal Energy Regulatory Commission (FERC) has reported a remarkable milestone in the U.S. energy landscape, revealing that solar and wind energy together accounted for ...

ACP's Q1 2025 report finds clean energy achieved its second-strongest first quarter on record, with 7.4 GW of new capacity representing \$10 billion in domestic investment.
