-----

The code UN 3481 is far more than a string of numbers--it is a globally recognized United Nations identifier used to classify lithium-ion batteries contained in or packed with equipment during ...

A low-cost, scalable fabrication technology developed at MIT can integrate fast, efficient gallium nitride transistors onto a standard silicon chip, which could boost the performance of ...

The Joint Meeting noted that, despite the current proper shipping name assigned to UN No.3536, the articles covered by this entry were closer in nature to machinery than to cargo transports units.

Understanding and mastering these new regulations, especially the correct application of battery UN numbers, is a prerequisite for safe and compliant battery trade.

After a cyber attack or natural disaster, a backup network of decentralized devices -- like residential solar panels, batteries, electric vehicles, heat pumps, and water heaters -- could restore ...

As part of an MIT Energy Initiative seminar, Emily A. Carter, a professor at Princeton University, explained the importance of climate change mitigation in the energy transition, ...

MIT News explores the environmental and sustainability implications of generative AI technologies and applications.

Researchers developed a fully integrated photonic processor that can perform all the key computations of a deep neural network on a photonic chip, using light. This advance could improve ...
