The IEA's 2022 Southeast Asia Energy Outlook reported that under stated policies by the ten countries in the ASEAN region, three-quarters of that increasing demand will be met with fossil fuels, leading to ...

This study is technology-agnostic with respect to energy storage; however, the parameters defining storage in our models, such as cost forecasts and operating limits, most closely ...

In India, developers are moving quickly to pair renewables with advanced storage technologies. Companies like Envision and SUN Terra are planning multi-hundred-megawatt ...

Discover how energy storage systems in Asia-Pacific transform regional grids with China leading 85GW capacity growth.

South Asian countries follow diverse paths in generating electricity, yet solar and wind energy are still far away to replace traditional fossil fuels. At the same time, momentum is building to ...

We conducted scenarios-based capacity expansion modeling to assess when, where and how much energy storage can be cost-effectively deployed in India through 2050.

To meet this increase in demand, the supply of new renewable energy developments has to be supported by energy storage capacity, including BESS and pumped hydro, with a target of 50GW of ...

ES can complement variable renewables, but new investments in ES are not necessarily needed to integrate large amounts of renewable energy (e.g., GTG study for India).
