The results offer an overview of the energy policies in the APAC region and their impacts on energy transition.

This paper examines the economic effects of the global energy transition and the large uncertainty surrounding future fossil fuel demand on countries in the Asia-Pacific region.

During 2020-2023, energy transition related investment per capita in Asia Pacific averaged USD 115/person, 12% lower than the global average. Excluding the largest recipients - China and APAC ...

Asia Pacific's energy transition is progressing with significant investments in renewables, but rising energy demand and reliance on fossil fuels pose challenges to achieving net-zero goals.

The transition to clean energy is no longer a distant ambition--it is an urgent necessity. Across the Asia-Pacific, economies are feeling the growing pressure of climate change, energy ...

The future of the world's green energy transition will be significantly shaped by the decisions and actions taken in Asia and the Pacific. Home to 60% of the world's population, this ...

The next stage of the energy transition is system-led, aligning renewables, power grids, industry, and data to drive down costs and unlock cross-sector scale.

Developing Asia's energy transition hinges on a resilient energy system relying on two key pillars: (i) reduced dependence on fossil fuels and (ii) enhanced energy security.
