Is Port Moresby a sustainable city?

Port Moresby's journey towards sustainability is an ongoing process that requires the dedication of all its inhabitants. The initiatives discussed above reveal a commitment to nurturing a city that values environmental health, economic vitality, and social equity.

Why is the marine ecosystem deteriorating in Port Moresby Bay?

The marine ecosystem of the Port Moresby Bay is progressively deteriorating due to the effects of climate change and of increasing developmental activities along the shoreline. The city's expansion and the over exploitation of coastal natural resources have reduced much of the original vegetation.

What is the Port Moresby Nature Park?

The Port Moresby Nature Park is a prime example of conservation efforts within the city, serving as a haven for local flora and fauna and educating the public about environmental stewardship. In addition to the Nature Park, initiatives are underway to plant more trees along city streets and in neighborhoods.

What is Port Moresby Papua New Guinea known for?

Port Moresby is a coastal city of Papua New Guinea. The coastal environment is heavily built up with increased demand for coastal landfill developments depleting mangroves and reef ecosystems which increases the risks and vulnerability of built structures and communities exposed to sea level rise.

Together, we can create a cleaner, greener, and healthier Port Moresby. Let's protect the natural beauty of Papua New Guinea, not just for us but for future generations.
