Accelerating solar deployment, stockpiling and diversifying imports would mitigate the threat to European economic security from solar PV imports. Executive summary. The European ...

Discover the state of solar panel manufacturing in Europe, the challenges posed by imports, and what EU countries are doing to rebuild local production. Learn how European-made solar can boost ...

Five key trends shaping the European solar industry in the second half of 2025 -- prices, policies, technologies, financing, and evaluation. This guide helps businesses seize critical ...

Solar energy, in particular photovoltaics (PV), is currently the fastest growing renewable energy source in the EU. Last year, 56 GW of solar PV were installed in the EU, two thirds of it on rooftops, ...

There has been little light relief for European manufacturers of solar panels over the past few years. A glut of cheap Chinese solar panels triggered a flurry of factory closures,...

As the European Union (EU) ambitiously strides towards a greener future, it faces a challenge: a surplus of solar panels. In this blog post, we'll take a closer look at how the EU is ...

The PV market in the European Union (EU) has experienced remarkable growth, driven by the urgent need to transition to renewable energy and enhance energy security.

While solar photovoltaic (PV) installations are booming in Europe (and in other parts of the world), the local industry is closing down. In 2023, an estimated total of nearly 60 gigawatts (GW) of new solar ...
