"Our vision extends beyond electricity storage - this is about creating an integrated energy management platform," explains EK SOLAR's CTO during the recent Energy Summit.

This article explores the technical, regulatory, and logistical requirements of the project, its alignment with EU sustainability goals, and its implications for the global energy storage market.

The cost of energy storage is decreasing, whilst the share of renewable energy in the energy mix is increasing, offering interesting development opportunities for energy storage. ...

As Europe accelerates its shift toward carbon neutrality, grid-scale storage solutions like this are no longer optional - they're the backbone of sustainable power systems. Let's unpack what makes this ...

As Lyon positions itself as a leader in clean energy innovation, its new chemical energy storage power station stands at the crossroads of renewable integration and grid stability.

Their initial quotes ranged from EUR480 to EUR620/kWh. By negotiating directly with Turkish battery pack assemblers and using French-made inverters, they achieved EUR312/kWh - beating even German ...

Over 40% of Europe's energy storage projects in 2023 were linked to thermal plants. Lyon's initiatives aim to set a benchmark for flexible, low-carbon power generation.

Take the Lyon-based textile manufacturer that slashed energy bills by 38% using a 250kW/500kWh system. Their 2023 BESS quotation of EUR285,000 would cost EUR229,000 today - proof that timing ...
