This graph represents the evolution of the French energy mix, with a view to the evolution of installed generation capacity in France, overall and by technology.

SNCF, the national railway company of France, is exploring the use of photovoltaic (PV) solar modules on railway tracks. The latest container-based solar-plus-storage plant developed by ...

In Hydro4U, the structural part of the plant is rigorously reduced and standardised by eliminating the traditional powerhouse and installing the turbines in a prefabricated container.

Discover Mini Green Power's 1MWth unit: 95% in-house design, patented tech, and a game-changing approach to local clean energy production.

Power generation, cogeneration or trigeneration, we deliver high-quality containerized plants that are modularly designed to meet your project's unique requirements. Our plants support different ...

Featuring a 25 megawatt-hour (MW/h) storage system with 25 MW of power, the project required an investment of approximately EUR15 million and includes 11 integrated containers, each with a ...

Grand'Maison, France's most powerful hydroelectric dam, has been generating electricity for decades, but is now also called upon to absorb peaks in consumption or overproduction linked to the rise of ...

While tourists joked about athletes needing portable generators, France's energy sector was already sprinting toward a solution: large-scale energy storage power plants.
