It may seem an unlikely mission for clean-energy developers, but in many states, including Illinois, grazing sheep between rows of photovoltaic panels is considered the most efficient ...

Raising "solar sheep" under solar panels offers a lucrative and sustainable opportunity for farmers, according to a study led by Western University. These sheep naturally graze under ...

While Gray farms sheep for their meat, she noted that raising sheep under solar panels has notable advantages for the animals' wool, a finding also reported by solar companies like ...

Solar photovoltaic (PV) growth can be stalled due to social acceptance. Agrivoltaics can improve social acceptance by enabling dual use of land. The most popular type of agrivoltaics in ...

Western professor Joshua Pearce collaborated with professional shepherd Rafael Lara on a study that shows the profitability of "solar" sheep, raised specifically to trim grass and weeds under ...

Sheep grazing between solar arrays showed no negative health impacts. Instead, researchers documented enhanced wool quality with increased fiber strength and growth rates. The ...

Learn how solar grazing with sheep is revolutionizing vegetation management at solar farms while preserving agricultural land.

Offering a higher return on investment compared to traditional sheep farming, this model also stands out as an economically and environmentally sustainable option for solar farms.
