With China implementing major changes to its solar market design this year, a temporary dip in global growth in 2026 appears very likely. Meanwhile, other regions are falling behind, ...

China remained the dominant market, installing between 309 GW and 357 GW and accounting for nearly 60% of all new installations. The European Union followed with 66 GW, led by Germany (17.2 ...

Cumulative installed solar capacity, measured in gigawatts (GW).

Global health gains are at risk. New funding models, regional systems and delivery innovation are vital to build resilient, equitable healthcare worldwide.

The Global Cybersecurity Outlook 2025 highlights key trends shaping economies and societies in 2025, along with insights into emerging threats and solutions.

Health and healthcare have changed dramatically in 2025, characterized by a downturn in global health financing and more of a shift to artificial intelligence (AI) and data-driven care. From ...

Global supply chains face rising geopolitical fragmentation and economic divergence, driving four plausible outlooks, from multilateral cooperation to full degradation.

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...
