France has revised its Multi-Year Energy Program (PPE), reducing its 2035 solar energy target to 90 gigawatts. This marks a significant cut in the country's renewable energy ambitions, as ...

France's solar sector has reached several significant milestones this year, underscoring the country's growing role in Europe's renewable energy transition.

France is ramping up its solar ambitions. But despite having the physical space, developers face a maze of regulatory, ecological, and local challenges that slow progress and ...

France added 4.6 GW of new solar capacity in 2024, pushing its total to 22.1 GW. With ambitious targets set for 2030 and beyond, the country is ramping up ground-mounted and rooftop ...

What was feared by many stakeholders has been confirmed, as the targets for photovoltaic energy in the new version have been revised downwards.

France's energy landscape is undergoing a significant shift from nuclear power to renewable energy sources, creating a substantial market opportunity for solar installers.

LCP Delta explores the shifting landscape of France's solar sector. Learn about the emerging risks and opportunities, and why strategic stability is key for residential PV and self ...

Now, they are adapting to the boom in solar: power market data shows France's nuclear stations are increasingly flexing their output around the technology -- turning down during the day ...
