One last problem I run into is that when drilling the holes for the top holes of the mounting bracket, my actual is too big so it's hitting the top part of the window so I can not make a parallel ...

That's exactly what happens when photovoltaic panel columns aren't buried deep enough. The industry standard for solar panel post depth typically ranges from 4-8 feet, but here's the kicker: 42% of solar ...

Modern photovoltaic panels typically come with pre-drilled mounting holes, but here's the kicker - they're usually located on the longer frame edges, not the sides.

My policy has always been to center drill deep enough that the hole size being drilled has little chance to move out of the desired location. Needless to say, the chances are ...

Let's face it - most solar installers would rather talk about energy output than hole sizes. But here's the kicker: 38% of warranty claims stem from improper mounting hardware installation. The holes you ...

When fastened to a rafter, it uses five mm diameter mounting screws, eliminating the need for a pilot hole and caulking. The RT-APEX features slide-in mounting and one-step leveling to adjust and level ...

A side-of-pole solar bracket is a mounting system used to install solar panels on the sides of poles or posts. This type of bracket allows for easy and secure installation, making it ideal for applications ...

Now, let's talk about the ideal depth for the holes. Generally, it is recommended to drill holes into concrete fence posts to a depth of about one-third to half the height of the ...
