The utility-scale data covers all operating solar farm phases with capacities of 1 megawatt (MW) or more and all announced, pre-construction, construction, and shelved projects with capacities greater than ...

At utility-scale facilities where PV is one of several technologies in use, the PV capacity itself may be less than one megawatt, but this is relatively rare: based on EIA's latest data, only 20 ...

The list shows that there are more than 195 GWdc of major solar projects currently operating. There remains an enormous amount of capacity in the pipeline, with more than 158 GWdc of large-scale ...

The Rising Star of Utility-Scale Solar: Understanding 3.5MW Photovoltaic Systems As of Q1 2025, over 18,400 utility-scale photovoltaic installations worldwide use 3.5MW panels as their primary energy ...

Solar photovoltaic (on-grid) electricity installed capacity, measured in gigawatts. The renewable power capacity data represents the maximum net generating capacity of power plants and ...

Global solar photovoltaic capacity has grown from around 40 gigawatts in 2010 to approximately 2.2 terawatts in 2024. Only in that last year, installations increased by almost 40 ...

The United States Large-Scale Solar Photovoltaic Database (USPVDB) provides the locations and array boundaries of U.S. photovoltaic (PV) facilities with capacity of 1 megawatt or more. It includes ...

The solar energy industry created more new jobs in the US than any other energy subsector last year. It would take around 18.5 billion solar panels to produce enough energy to power ...
