-----

BloombergNEF expects cumulative energy storage capacity in 2035 to reach 2 terawatts (7.3 terawatt-hours) - eight times the level in 2025. Utility-scale projects continue to dominate ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Energy storage boosts electric grid reliability and lowers costs, 47 as storage technologies become more efficient and economically viable. One study found that the economic value of energy storage in the ...

The American Clean Power Association reported that the United States added a record 1,602-MW of battery storage capacity in the first quarter of 2025, equivalent to the energy generation ...

-- The Solar Energy Industries Association (SEIA) is unveiling a vision for the future of energy storage in the United States, setting an ambitious target to deploy 10 million distributed ...

California and New York led Q2 CCI storage installations, accounting for over 70% of total capacity, while Illinois gained traction. Community storage deployment remained limited due to ...

A quick look at projections for energy storage development, including costs and types of long-duration technologies in demonstration.

Just look at what's coming in 2025: an estimated 80 GW of new grid-scale energy storage will be added around the globe. That's not just growth--that's an eight-fold leap from what ...
