Overview Government action Solar manufacturing industry See also External links The Japanese government is seeking to expand solar power by enacting subsidies and a feed-in tariff (FIT). In December 2008, the Ministry of Economy, Trade and Industry announced a goal of 70% of new homes having solar power installed, and would be spending \$145 million in the first quarter of 2009 to encourage home solar power. The government enacted a feed-in tariff in November 2009 that requires utilities to purchase excess solar power sent to the grid by homes and businesses and pay twice the st...

The annual share of solar power generation in 2024 was 11.4%, a slight increase from 11.2% the previous year. The share of Variable Renewable Energy (VRE), which includes solar and wind, ...

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable ...

In May 2021, the Japanese Trade Ministry said that Japan may require up to 370 GW of solar capacity by 2050 to reach the goal of cutting carbon emissions to zero.

Japan: Solar electricity generation, billion kilowatthours: The latest value from 2023 is 97.48 billion kilowatthours, an increase from 93.27 billion kilowatthours in 2022. In comparison, the world average ...

Japan has the third highest solar capacity in the world behind China and the United States, but its formerly rapid growth has slowed considerably.

Japan's electricity mix includes 31% Gas, 28% Coal and 11% Solar. Low-carbon generation peaked in 1998.

In 2024, solar contributed approximately 97 TWh, representing almost 10% of the electricity generation share. Global solar generation grew by 474 TWh in 2024: its largest increase ...
