The microgrid is currently under construction and is expected to be completed in 2023. Learn more about the installation process and subscribe to receive updates as the microgrid progresses.

The content of this Guide is intended to represent Good Utility Practice and as more Community Microgrids are deployed on the PG& E system, this Guide will be updated to reflect new information, ...

Microgrids are one way that US clients and owners of distributed energy resources can help control rising energy costs. Cities, towns, counties, and industries are striving to decarbonize and meet their ...

This information can be used to develop research and development agendas for next-generation microgrids that provide cost-effective, reliable, and clean energy solutions.

This work includes site descriptions, microgrid project objectives, design basis and rationale, as well as performance criteria. For example, this will include critical loads, services and power outage ...

Compliance with this UFC is mandatory for the planning, design, construction, and commissioning of networked standby power systems, including microgrids for facilities and installations, regardless of ...

Preliminary microgrid conceptual design for a microgrid solution including DER optimal source sizes, enabling equipment such as electrical switchgear, communication, microgrid ...

Develop high-level specifications that highlight the key requirements for the microgrid and develop an RFP for the project's design and construction (similar to a design-build process).
