This analysis used tracking data from households both with photovoltaic equipment installed and without in "S Town," Jiangsu Province, from 2017 to 2021. The results indicate that ...

The results show that currently the photovoltaic power generation technology is relatively mature and widely applied, and passive photovoltaic technology can play a greater role in reducing ...

Juungar Banner in Inner Mongolia is one of the 676 pilot areas for whole-county distributed solar PV development. Under the pilot program, the banner government plans to install solar panels on more ...

Heterogeneity analysis shows that providing public welfare jobs and direct photovoltaic (PV) subsidies are the most effective ways to promote clean energy transition for rural households.

This paper examines inequality in household adoption of rooftop solar photovoltaics in rural China through a qualitative study of three villages. The Chinese government promotes distributed solar to ...

Launched three years ago in 676 pilot county-level areas, the program aims to tap the potential of the rooftops of government and public buildings, industrial and commercial complexes ...

Rooftop photovoltaic (PV) power generation is an important form of solar energy development, especially in rural areas where there is a large quantity of idle rural building roofs.

Local authorities said the distributed solar PV system in Lianxing went into operation in 2017, three years after villagers moved into new homes fitted with solar panels. Households in the village now ...
