-----

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

All the latest science news on solar power generation from Phys . Find the latest news, advancements, and breakthroughs.

We explore the nine most exciting developments in the solar industry in 2025, from indoor solar panels to "two-for-one" fission.

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Is solar power going to take over the world? The past few years have seen a frankly astounding acceleration in the rate of its deployment, with total generation capacity doubling between ...

Solar PV will account for around 80% of the global increase in renewable power capacity over the next five years - driven by low costs and faster permitting timeframes - followed by wind, ...

Explore the latest solar panel technology, new solar panel technology, and solar energy technology trends improving efficiency.

Solar Energy Information. Read the latest news and techniques for efficient solar photovoltaic power, new solar energy systems and more.
