Why is there a shortage of transport capacity in the Netherlands?

In many parts of the Netherlands, grid operators are experiencing or expecting a structural shortage of transport capacity on their electricity grids. This is the result of rapidly growing electricity demand due to the energy transition on top of economic growth.

How long does it take to expand the Dutch electricity network?

Dutch grid operators are investing billions of euros to expand the electricity network. This includes: However, grid reinforcement takes time: typically 5 to 7 years for major upgrades. 2. Congestion management In the meantime, congestion management offers a solution. Grid operators work with companies to:

Will Noord-Holland have to wait 10 years to switch to electricity?

Companies in large parts of Noord-Holland may have to wait 10 years before they can be connected to the electricity network, grid operators Tennet and Liander have warned. New companies will miss out and existing companies wanting to become more sustainable will have to wait to make the switch from gas to electricity, they said.

Will Noord Holland postpone the switch to gas?

However, so far companies major consumers of electricity have not heeded the call. Tennet is calling on companies Noord Holland to postpone the switch to gas for the time being. The greenhouses in the province have their own generation plants which the operators can call on to provide extra electricity.

Load shifting betekent simpelweg dat je je energieverbruik verplaatst naar de momenten dat de energieprijs laag is en het aanbod groen is. Voor een duurzamer Nederland is dit concept ...

From Amsterdam to Rotterdam, discover tulip fields, historic windmills, quaint towns and more in our travel guide to the Netherlands. Find top attractions and tips.

Power networks in Utrecht, Gelderland and Flevoland will be overloaded at peak times from 2026 due to the accelerating pace of electrification, the Netherlands' climate and energy policy ...

Load shifting maakt ruimte op uw bestaande aansluiting. Voorkom piekbelasting, benut uw eigen opwek optimaal en groei zonder netverzwaring.

The Netherlands is rationing electricity to ease grid congestion and avoid full-scale load shedding. Europe as a whole is facing rising pressure from electrification outpacing infrastructure ...
