By storing surplus energy in its reservoirs, Norway can redistribute this stored energy during periods of high demand, which helps regulate electricity prices in European markets. This flexible storage ...

Whether for EVs or energy storage, Norway has always had ideal conditions for battery growth: renewable energy in the form of hydropower, strong government financial incentives for EV ...

After setting impressive EV battery records, Norway has turned its focus to an even larger market: batteries for stationary energy storage - a market expected to reach EUR 57 ...

Hydro has made the final investment decision for its largest hydropower development in over 20 years. Construction of the Illvatn pumped storage power plant in the Luster Municipality will ...

As of March 2025, Norway's government has committed \$2.1 billion to gravity energy storage systems - but what makes this 19th-century physics concept suddenly viable for modern grids?

Norwegian aluminium company Norsk Hydro ASA (OSE:NHY) has made the decision to invest NOK 2.5 billion (USD 249m/EUR 214m) to build a pumped storage power plant at home to ...

Norway's \$2 trillion sovereign wealth fund, managed by Norges Bank Investment Management, is expanding its renewable energy investments, including into power grids, according ...

With this project we can increase production, reservoir capacity and efficiency from our facilities in Fortun, as well as take better care of water resources with minimal environmental footprint.
