Rocket Lab released a new line of customizable solar arrays built to power satellites in any orbit with unmatched efficiency and flexibility.

Rocket Lab's new line of customizable solar arrays signals a transformative leap in how next-generation satellites will harness power in orbit--economically, efficiently, and at scale.

With SEP, the spacecraft collects energy from the Sun via solar arrays to generate thrust, eliminating many of the needs and limitations of storing propellants onboard.

Rocket Lab's family of customizable, next-generation solar arrays, Standardized Array (STARRAY), to meet the diverse power needs of satellites operating in any orbital conditions.

Elon Musk's SpaceX wants to launch a constellation of 1 million satellites that will orbit Earth and harness the sun to power AI data centers, according to a filing at the Federal ...

USA, Inc. (Nasdaq: RKLB) has unveiled a new suite of customizable solar arrays, branded as STARRAY, aimed at addressing the broad spectrum of satellite power demands across ...

Currently, more than 1100 satellites are orbiting with Rocket Lab solar technology, a number that is expected to increase as the demands for connectivity, earth observation and space ...

Rocket Lab will provide solar panels, carbon composite panel substrates, solar cells, and photovoltaic assemblies for OneWeb satellites. These components will help deliver the Eutelsat ...
