Does SDG& E have a battery & microgrid portfolio?

SDG& E has been rapidly expanding its battery energy storage and microgrid portfolio. We have around 21 BESS and microgrid sites with 442 megawatts (MW) of utility-owned energy storage and another 40+ MW in development.

Where are SDG& E battery systems installed?

Typically, these battery systems and microgrids are installed on SDG& E-owned property; they are adjacent to our existing substation facilities or in critical locations where grid reliability and resiliency is needed most.

How do I contact SDG & E about Bess and microgrid projects?

If you have any questions or concerns about these BESS and microgrid projects, please contact SDG& E's toll-free project number at 1-844-210-5821.

How does SDG& E work?

SDG& E will work to minimize impacts such as noise and dust from construction activities to the extent possible. Construction may take place in phases. Sometimes planned outages may occur due to the nature of this work, and customers will be promptly notified.

These measures not only help you reduce your energy costs and improve your indoor air quality but can also reduce greenhouse gas emissions that contribute to a changing climate that affects all of us.

On November 18 th, three SDBEC members and I were fortunate enough to tour the waterfront housing project led by architect Brett Farrow. The 13 detached, one-of-a-kind, cedar-clad ...

Solar thermal, heat pump pool heater (HPPH), or on-site renewable/recovered energy systems for heating pools and spas (excluding portable electric spas) with specific efficiency, sizing, and control ...

As directed by the 2024 CAP, the program will be updated to encourage additional green building measures, adding new compliance options and opening eligibility criteria for energy efficiency and ...

A score of 50 represents median energy performance, and a score of 75 or higher means the building is a top performer and may be eligible for ENERGY STAR<sup>®</sup> certification.

Today, wireless base-stations consume a lot of power and contribute significantly to the carbon footprint of
