What is the Smart Micro Grid Controller project?

The Smart Micro Grid Controller project develops intelligent equipment for microgrids, featuring integrated control and safe operation functions. This project aims to support energy developers and producers in using their investments more efficiently.

What is a smart microgrid demonstration system?

The smart microgrid demonstration system features a 100 kW/400 kW h energy storage solution based on three equally sized vanadium flow batteries. It also includes 150 kW of solar PV capacity.

Can a microgrid save energy?

By incorporating distributed energy resources (DER), a microgrid can help save on energy costs by sending excess electricity back to the grid during peak demand. This not only improves reliability but also optimizes energy management.

What is the BCIT smart microgrid?

The BCIT Smart Microgrid is an ongoing applied research, development and demonstration initiative. This page highlights a number of the key projects implemented on the BCIT Burnaby campus. We are happy to share these key projects with you through video tours and virtual site visits. To get started, please select the tour from the list below.

These advances have brought significant changes in two main areas: how microgrids work together and how each microgrid is managed.

Implement and operate your microgrid to produce and consume local energy. Monetize the value of your DER, optimize your bill, and avoid interruptions.

Max and Tony unpack the power of smart microgrids -- local energy systems that let businesses generate, store, and control their own energy. From solar and he...

Discover the Benefits of the Smart Grid by Drax Group - an explainer video crafted for energy enthusiasts and professionals in the renewable energy sector.

We are happy to share these key projects with you through video tours and virtual site visits. To get started, please select the tour from the list below. Contact our Applied Research team to discuss ...

Smart Microgrid Promotional Video
