---

A brise-soleil--or "sun breaker" in French--is a form of permanent external solar shading system that uses a series of horizontal, vertical, latticed, or patterned blades to block, diffuse, or ...

In hot climates (28&#176;L or less) that do not require any heating, extend overhangs, roof, or shading devices to cover the entire solar fa&#231;ade and adjacent outdoor living spaces. For more detailed information, ...

Improved HVAC efficiency: Exterior shading systems block solar heat gain before it enters a building through the glazing. The reductions in solar heat gain put less load on HVAC ...

Modern dynamic shading systems incorporate sun-tracking capabilities that adjust facade elements based on real-time solar trajectories. Using sensors and actuators, these systems ensure ...

Experience the ultimate convenience and comfort with our heavy-duty exterior screens. Elevate your living space with our durable exterior-mounted roll-up solar screens. Not only do they block up to ...

During cooling seasons, external window shading is an excellent way to prevent unwanted solar heat gain from entering a conditioned space. Shading can be provided by natural landscaping or by ...

Shadovoltaic is a fixed or controllable external glazed solar shading system that may be installed either vertically or horizontally in front of the facade. Photovoltaic cells are integrated into the glass so as to ...

Discover how external solar shading enhances energy efficiency, reduces carbon footprint and supports sustainable design in modern architecture.
