Solar power in Georgia on rooftops can provide 31% of all electricity used in Georgia. Net metering is limited to 100 kW for non-residential consumers and 10 kW for residential consumers, up to 0.2% of previous years peak demand. Georgia was given an F for net metering. Georgia is not a Net Metering State. The state's first solar community is located at Weatherford Place in Roswell. All hom...

Learn about Georgia Power's commitment to solar energy, its benefits, and how you can harness solar power for your home or business.

With a growing emphasis on renewable energy sources, the landscape of Georgia's power generation is undergoing notable changes. This article explores the various dimensions of solar panel farms, from ...

As of May 2025, Georgia had over 16,300 megawatts (MW) of operating clean power generation capacity, enough to power approximately 3 million homes.³ Of this total, 5,274 MW were from solar, the ...

In 2024, Georgia produced the equivalent of 6% of the electricity it consumes from solar, wind and geothermal power, compared with just 0.2% in 2015, part of a larger transition toward clean energy ...

According to Renewables on the Rise 2024, the eighth edition of our annual report on the state of clean energy in America, Georgia now generates 3,616% more solar power than it did in ...

Five utility-scale solar farms totaling 1,068 MW will be built across Georgia, boosting clean energy for the state.

Georgia has the potential to host up to 87 GW of solar power capacity, according to a recent study by the Georgia Institute of Technology. This capacity could generate around 150 TWh of ...
