Passive solar design is about thoughtfully positioning and constructing a home so it can capture the sun's energy for heating in colder months and deflect it in hotter months--without relying on complex ...

The most obvious way to get solar energy to your house is to ...

To reach a good balance requires thoughtful consideration of house siting, roof slope, roof orientation, and shading--the key factors that determine a home's suitability for on-site generation of...

Let's walk through how to calculate the amount of solar power ...

The most obvious way to get solar energy to your house is to install panels on your roof. But roof panels have one big disadvantage: They are attached to your roof.

Many choose to add solar arrays to their roofs; others opt for ground-mounted systems. But sometimes house orientation, roof penetrations like dormers and chimneys, tree canopy coverage, or ...

Ground-mounted solar is a great option, but it's uncommon to have enough space to put up a decent-sized system in your yard. So that begs the question, what is the best roof design for solar panels? ...

Solar panels should typically be installed on the most structurally sound and ideally oriented sections of the wooden roof. Prior to installation, an assessment of the roof's structure, ...
