-----

In comparison to synchronous Ethernet and network clock protocols, 1588v2 offers sub-microsecond time synchronisation that fulfils the precision and accuracy re

Qorvo products are designed for multimode base stations. Whether you're needing high efficiency, low noise or high linearity, Qorvo's portfolio offers market-leading performance and is ...

Why is synchronization important in 5G?In 5G, synchronization plays an even more significant role by enabling the high capacity and low latency that users expect.

These tools simplify the task of selecting the right power management solutions for these devices and, thereby, provide an optimal power solution for 5G base stations components.

Circuit-switched networks have been transitioning to packet-switched networks allowing base stations to use synchronous Ethernet and packet-based synchronisation ...

This article described the basics of 5G and introduced two MPS parts -- the MPQ8645 and MP87190 -- that can be used to improve the AAU or BBU architecture within a 5G base cell station.

There are several millions of base stations deployed world-wide today and the density will increase with 5G. Each base station comes with many filters and each filter requires many motors to be fully tunable.

This Ericsson Technology Review article explains 5G synchronization requirements and the solutions that enable an efficient and cost-effective implementation.
