Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the solar industry.

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in 2025.

As module prices fell due to oversupply, installation volumes continued to grow, highlighting both the strength and volatility of the global PV industry.

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

Photovoltaic (PV) technology has become a cornerstone in the global transition to renewable energy. This review provides a comprehensive analysis of recent advancements in PV ...

Drawing on insight from Lens Power, we've set out our view of the factors that will shape the year ahead - and beyond - in Global solar: four things to look for in 2025.

More than a quarter of the nation's capacity was installed in Texas. Our annual Year in review report includes a 10-year outlook for every segment. We expect cumulative US solar capacity to more than ...

As we look toward 2025, the landscape of photovoltaic (Pv) panels is set to undergo transformative changes driven by emerging technologies and evolving market dynamics.
