According to the Energy Institute's Statistical Review of World Energy 2025, there are now 18,65,490 solar power installations worldwide in 2024-25.

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

This listicle explores the top five countries leading in solar power adoption through sheer capacity, innovative policies, or per capita penetration. These leaders are transforming their energy ...

Notably, China is currently leading the way in solar photovoltaic (PV) generation, with its total installed capacity surpassing 1,100 gigawatts (GW) as of June 2025. This progress reflects a ...

Solar energy capacity is growing rapidly, driving the global transition to renewable energy. This graphic visualizes the top 15 countries by cumulative megawatts of installed ...

China continues to lead the world when it comes to total installed solar PV capacity, reaching 888,000 megawatts of installed capacity as of the end of 2024. Even while making up ...

Discover the top countries with the most solar power installed in 2025. Explore global solar growth trends, annual installation rates, and how nations are embracing clean, renewable ...
