In March 2024, the House of Lords Science and Technology Committee said increasing the UK's long-duration energy storage capacity would support the UK's net zero plans and energy ...

This edition of the EnergyPulse report on Energy Storage shows there is 8.7GW of batteries in operation and under construction and more than 30GW projects have now been consented.

As already highlighted, the UK government has said it anticipates that at least 30GW of "low carbon flexible assets, which includes electricity storage", may be needed by 2030 to maintain ...

In our Future Energy Scenarios we explore a range of credible ways to decarbonise the energy system to deliver the UK's target to achieve net zero carbon emissions by 2050 and consider the potential ...

This policy briefing explores the need for energy storage to underpin renewable energy generation in Great Britain. It assesses various energy storage technologies.

Solar Energy UK has published a manifesto stating that 50GW of solar is needed by 2030, with 30GW of zero-carbon energy storage. In the first 100 days, it calls on the next government to ...

Battery storage will be essential as weather-dependent renewables make up a growing share of the energy mix. By 2030, the UK government targets 43-51 GW from offshore wind, 45-47 ...

By 2030, the UK must scale up to 50GW of solar and 30GW of zero-carbon energy storage to meet climate targets and ensure energy security. The manifesto outlines five pivotal actions to empower ...
