In this white paper, we will discuss the differences between Uninterruptable Power Supply (UPS) technologies, features to look for in UPS"s, and how certain types of UPS"s can be used not only for ...

One result of breaking the input Neutral and Hot connections when operating on battery is that you may be able to measure voltage between Neutral and Ground at the output receptacles when the UPS is ...

A single ground fault on a floating battery would provide a ground reference for the UPS system. The ground fault would not conduct much current but would cause the battery voltage to be unbalanced ...

Most likely the UPS input is delta, no neutral, and the UPS output is separately derived, Y, with a new neutral. From your description it"s not clear. Is the UPS actually going to battery or ...

Your idea of diodes is problematic, but at the least you"ll need to seek out ones with the lowest possible voltage drop, such as Schottky diodes. You"re still dealing with 0.5V drop.

I"ve been told that a properly grounded electrical circuit is required for a UPS to detect the power-drop and take-over in a timely manner. I would appreciate knowledgeable feedback as to whether or not a ...

Positive grid corrosion has been the most common end-of-life factor for UPS batteries, which is a result of the normal aging process due to UPS battery chemistry and involves the gradual breakdown of the ...
