-----

In the first quarter of 2025, overseas orders for energy storage exceeded 82 GWh! The ongoing trade war between China and the United States is expected to conclude by the end of the year.

These innovations reflect a larger trend: Chinese battery firms are not merely competing on scale; they are defining the global chemistry roadmap. As supply chain constraints and material ...

The United States battery industry has fallen dangerously behind the global leaders. The main thrust of the U.S. policy response to the battery crisis must be the urgent commercialization of ...

China dominates lithium-ion battery exports due to its massive production capacity, advanced supply chain, and government support. With over 60% of global production, China ...

For now, China's lead may be sufficiently large that policymakers perceive limited risk. Further, the major growth engine for China's EV and battery exports is likely to come from markets outside of Europe ...

Foster collaboration among relevant stakeholders (governments, utilities, renewable energy developers, civil society organizations, development banks, local communities) for the following purposes:

Discover how China's lithium-ion battery export controls will reshape global supply chains and drive energy storage innovation.

China's energy-storage industry is facing challenges in 2025 due to the escalating US-China trade war and tariffs affecting exports to the US, its largest market. Analysts from WaterRock...
