What is a solar array?

An array of anything is an ordered arrangement of objects. Solar panels happen to be objects, and therefore, solar arrays are groups of solar panels. They should probably be more commonly called "solar panel arrays."

What is a solar array & why is it important?

The solar array is the most important part of a solar panel system - it holds all the panels in your system, collects sunlight, and converts it into electricity. In this article, we'll share some common questions to ask yourself before installing a solar panel system on your home and ensure you get the most productive array possible.

What is the difference between a solar panel and an array?

A solar panel is a single unit that converts sunlight into electricity through its solar cells, while a solar array consists of multiple panels connected together in a specific arrangement.

Do I need a solar array?

Solar panels happen to be objects, and therefore, solar arrays are groups of solar panels. They should probably be more commonly called "solar panel arrays." Because it takes a number of solar panels to produce enough power for a home, if you're installing a solar system, you will definitely want an array.
