This graph shows the average and maximum coverage rate of electricity consumption by solar generation, at monthly and annual granularity. The solar coverage rate corresponds to the proportion ...

Solar PV installations in France started being substantial only from around 2008. Between 2009 and 2011 PV capacity grew almost tenfold, from a relatively low level.

This map shows the distribution of wind and solar photovoltaic power generation facilities in mainland France, aggregated by French department. The values displayed contain a partial estimate of ...

France: Solar electricity generation, percent: The latest value from 2023 is 4.63 percent, an increase from 4.58 percent in 2022. In comparison, the world average is 4.92 percent, based on data from 185 ...

Solar PV accounted for 14% of France's total installed power generation capacity and 5% of total power generation in 2023.

These regions currently have the largest installed capacities, accounting for 52% of France's total solar power in the third quarter of 2024.

Solar PV installations in France started being substantial only from around 2008. Between 2009 and 2011 PV capacity grew almost tenfold, from a relatively low level. In its 2014 report "Global Market Outlook for Photovoltaics", the European Photovoltaic Industry Association (EPIA) not only blames the French government for a lack of support, but also criticizes it for having "hastily freeze or reduce support mechanism...
