What precautions should be taken when working on a battery?

The following precautions should be observed when working on batteries: Wear personal protective equipment. Make sure the battery is well grounded. Contact with any part of a poorly grounded or ungrounded battery can cause electric shock and burns by high short-circuit current.

What are the safety requirements related to batteries & Battery rooms?

Employers must consider exposure to these hazards when developing safe work practices and selecting personal protective equipment (PPE). That is where Article 320, Safety Requirements Related to Batteries and Battery Rooms comes in.

Do you need documentation before entering a battery room?

It is a requirement to have all the documentation in place prior to authorized personnel entering a battery room to perform a specific work task on a battery system under normal operating conditions. However, it is likely the employee will need to enter the battery room to deal with a battery system that is not operating normally.

How to maintain a battery?

The battery top should always be kept dry and clean to avoid short-circuiting of the battery terminals or any leakage of current between the terminals caused by the dirt accumulated on the battery top. Do not place any conductive parts or metal tools on the battery top.

Section 480.9 (E) requires any personnel doors intended for entrance to, and egress from a battery room, to open in the direction of egress and be equipped with listed panic hardware.
