The exclusive way for the wind power generation to replace the coal-fired power generation is that human beings realize automatic control over the energy, pressure, speed, direction, volume and ...

Wind concentrator enhances the maximum power coefficient of the turbine by 108%. Two plates with flanges deflect the approaching flow downward through the rotor. Small wind turbines are ...

Abstract: Wind Funnel Concentrator System captures wind flow from any direction, funnels it down using tapered pipes leading to a concentrator that ends in Venturi section where the turbine should be ...

The wind-concentrating type novel wind power generation device has the advantages of simple structure, convenience in modularized manufacturing and installation, large output power of a...

Control and stabilize the operating wind speed of wind turbines, improve the efficiency of wind turbines, increase power generation, and use wind energy more effectively.

It details the operational mechanisms of horizontal-axis (HAWTs) and vertical-axis wind turbines (VAWTs), comparing their efficiencies, costs, and environmental impacts, such as HAWTs" ...

This study introduces the design, modeling, and control mechanisms of a self-sufficient wind energy conversion system (WECS) that utilizes a Permanent magnet synchronous generator ...

Abstract: The structure of the wind concentrator will directly affect the performance of wind-concentrating turbine. In this paper, to optimize the structure, the CFD software was used.
