These states demonstrate how wind power has become a reliable and cost-effective energy source for American communities. Texas, Iowa, Oklahoma, Kansas, and California stand at ...

This is a list of U.S. states by total electricity generation, percent of generation that is renewable, total renewable generation, percent of total domestic renewable generation, and carbon intensity in 2024. The largest renewable electricity source was wind, which has exceeded hydro since 2019.

Explore the tabs above to see interactive maps and charts of annual growth, cumulative installations, and share of generation by state and region. For more information on land-based wind energy from ...

This map uses data from the EIA to show how much wind electricity different U.S. states generate, and breaks down wind's share of total electricity generation in top wind power producing ...

Using three different sources of data and turbine power calculated for more than 126,000 sites in the United States, the toolkit provides powerful information for the next generation of wind energy ...

List of electricity data aggregated by U.S. state. View number of power plants, total monthly generation, monthly generation by source, and monthly electricity sales revenue.

In April, Iowa generated the highest percentage of its statewide energy from wind power. The state produce 76.2% of its total electricity from wind. States with the highest annual increase in ...

Mapping U.S. Wind Energy by State
Wind Electricity Generation by State Compared
How Does Wind Energy Work?
Growing America's Wind Turbine Capacity
This was originally published on April 25, 2022, on Elements. Wind power is the most productive renewable energy source in the U.S., generating nearly half of America's renewable energy. But wind doesn't blow fairly across the nation, so which states are contributing the most to U.S. wind energy generation? This map uses data from the EI...
