China has achieved another breakthrough in wind power development at ultra-high altitudes, with the world's highest wind power project in Xizang Autonomous Region generating over ...

LHASA -- China has achieved another breakthrough in wind power development at ultra-high altitudes, with the world's highest wind power project in Xizang autonomous region generating ...

China's wind power story is often told in terms of scale. Less examined is how that scale is being organized. In the country's far northwest, a region once known for relentless gales is turning ...

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

In recent years, China has made many new breakthroughs in the development of wind power technology in the fields of high-power wind turbines, wind turbines for ultra-low wind speed, ...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

As a listed area in China's clean energy development strategy for wind power, Bailifengqu experiences fresh gales for over 200 days annually, with maximum wind speeds reaching ...
